DATE OF ISSUE 12-4-2019

DATE OF EXPIRY 12-4-2024

DECLARED UNIT/FUNCTIONAL UNIT Roofing materials

One square meter waterproof roofing material on a flat or gently sloping roof with a maximum gradient of 20°. Based on a roof of 1.000 m² (40x25 m¹), representative for a roof of more than 50 m². Including prescribed fastening, overlay and installation method. Excluding insulation and the roof structure. **Unit: m² per mm thickness**

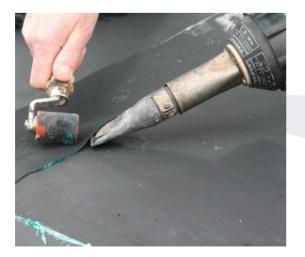

SCOPE OF DECLARATION

This MRPI®-EPD certificate is verified by **Harry van Ewijk of SGS Search**. The LCA study has been done by **NIBE BV**.

The certificate is based on an LCA-dossier according to ISO14025, NEN-EN15804+A1 and Assessment Method - Environmental Performance Construction and Civil Engineering Works (GWW) – version 2.0 November 2017. It is verified according to the EPD-MRPI® verification protocol May 2017. EPD of construction products may not be comparable if they do not comply with NEN-EN15804+A1. Declaration of SVHC that are listed on the "Candidate List of Substances of Very High Concern for authorisation" when content exceeds the limits for registration with ECHA.

VISUAL PRODUCT

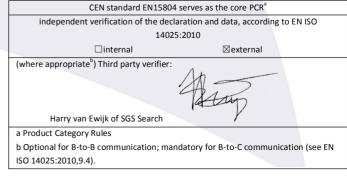

DESCRIPTION OF PRODUCT

HERTALAN[®] EASY WELD MF EPDM roofing including adhesives and sealants (HERTALAN KS137) and steel fasteners (screws + mounting plate).

DEMONSTRATION OF VERIFICATION

www.mrpi.nl: 1.1.00056.2019 HERTALAN[®] EASY WELD MF

DETAILED PRODUCT DESCRIPTION

General

HERTALAN[®] EASY WELD MF is a roofing and waterproofing membrane developed especially for mechanically fixed roofing systems. The rolls have a width of 1.40 metre and 20 metres of length. This means that with one seam in this system a roof of approx. 50-56 m² is covered. During the production process a UV-resistant green EW welding strip is applied to the EPDM rolls. These welding strips are heated up with hot air during the installation process so that a waterproof connection is created, for a seamless flat roofing.

• 1,31 kg/m² per mm thickness

Available thicknesses: 1,30-1,50-2,00 mm.

Production process

The entire production process takes place at Kampen-NL. The mixing of the raw materials is followed by shaping the uncured mixture into a sheet material. In the next step, by heat treatment, the EPDM mixture will be vulcanized. After vulcanization the product will be cut into the required sizes or through hot bonding seam process formed into bigger prefab sheets.

Delivery and assembly

HERTALAN[®] EASY WELD MF is rolled out at the desired position on the roof surface. The HERTALAN[®] EASY WELD MF is secured in place by adhering, mechanically fixing or placing ballast onto it. Overlaps are welded by hot air. Depending on the application method only spray equipment (adhesive) or tools for mechanically fixing are required. No particular measures are required to ensure protection of the fitters health. The instructions in the installation guideline must be observed.

Rolls of HERTALAN[®] EASY WELD MF are provided with a label through tape. Up to 10 rolls are placed onto a pallet. Packaging material can be recycled separately.

RSL

The HERTALAN[®] roofing systems are on the market for more than 40 years. According to report 37236/99-VI (SKZ, D) HERTALAN[®] roofing systems have an expected service life of 50 years and more.

| COMPONENT* | [KG] |
|---------------------------|------|
| EPDM Easy WELD MF roofing | 86% |
| Hertalan ks137 | 5% |
| Fasteners | 9% |
| | |

*> 1% TOTAL MASS

HERTALAN[®] EASY WELD MF is a homogeneous EPDM mixture consisting of 25-40 % EPDM synthetic rubber, 10-20 % mineral oil, 15-25 % filler, 15-30 % carbon black and 0-10 % additives.

SCOPE AND TYPE

The geographical location is the Netherlands and the product is produced in Kampen (The Netherlands).

The product is applied in roofing and the end of life phase is in the Netherlands. The background database is Ecolnvent version 3.3 and the LCA software used is Simapro 8.5. The EPD is a "Cradle to gate with options" EPD. The EPD is a specific EPD for a specific product.

Cut of rules

There is no cut-off of inputs and outputs in any of the processes during the life cycle stage, hence the environmental impact of all unit processes of each life cycle stage are considered.

Data quality

Specific data was collected from Carlisle through a questionnaire. In the case of missing data, a relevant proxy was searched and adjusted to the corresponding unit process.

Data collection

Production data concerning the material composition are collected in the period 2013-2014 and relate to the year 2013. The amounts of electricity and gas use for production are based on consumption data in the year 2013. The data has been re-examined in 2018 and deemed to be still representative for the current processes.

Allocations

| Allocations | |
|------------------------|--|
| Proces | Allocation procedure |
| Multi input processes | Landfill is a multi input process. For the modelling of landfill of the |
| | materials the Ecolnvent method was followed |
| | Incineration is a multi input process. For the modelling of landfill of the materials the Ecolnvent method was followed as well as the guidelines of the Dutch PCR for construction products (Bepalingsmethode). |
| Multi output processes | No multi output processes were applied |

SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION

A1. Raw materials supply

This module considers the extraction and processing of all raw materials and energy which occur upstream to the HERTALAN[®] EASY WELD MF manufacturing process, as well as waste processing up to the end-of waste state.

A2. Transport of raw materials to manufacturer

This includes the transport distance of the raw materials to the manufacturing facility via road, boat and/or train. On average, the transport characteristics for this life cycle stage are the following:

| Transport type | Truck | Transoceanic freight ship |
|-------------------|--|---|
| Weight*Distance | 1280 kgkm | 3470 kgkm |
| Ecolnvent Process | Transport, lorry >16t, fleet average/RER). | Transport, transoceanic freight ship/OCE U) |

A3. Manufacturing

This module covers the manufacturing of HERTALAN[®] EASY WELD MF and includes all processes linked to production such as storing, mixing, packing and internal transportation. Use of electricity and fuels production are taken into account as well.

The manufacturing process takes place at one production site. For upstream (raw material processes) and downstream processes (application, use, and waste processing) generic data is used when no specific data is obtained.

The manufacture of production equipment and infrastructure is not included in the system boundary. Packaging-related flows in the production process and all up-stream packaging are included in the manufacturing module.

A4. Transport to customer

This module has been declared for the Dutch situation.

The following steps are necessary to transport the EPDM roofing from the manufacturing site to the customer

| # | Name | Description | | | | | |
|---|-----------|---|--|--|--|--|--|
| 1 | Loading | The roofing membranes are loaded on the truck at the manufacturing site | | | | | |
| 2 | Transport | The roofing membranes are transported to the building site | | | | | |
| 3 | Unloading | The roofing membranes are unloaded from the truck and carried to the roof | | | | | |

The estimated distance to the building site has been set at 150 km (standard A4 transport distance for construction products in the Netherlands). The steps of loading and unloading have not been taken into account.

The transport needed for 1000 m² is shown below:

| Transport process | Transport, lorry >16t, fleet average/RER). |
|--------------------------------|--|
| Weight*Distance EPDM membranes | 301,03 tkm |
| Weight*Distance glue | 17,68 tkm |
| Weight*Distance fasteners | 31,82 tkm |

MRPI®-EPD STICHTING MRPI®

A5. Application and use

This module has been declared for the Dutch situation.

The HERTALAN[®] EASY WELD MF roofing membranes are connected by hot air on site.

For 1000 m^2 of roofing 21,5 kWh is needed.

The following amount of fasteners are needed.

5 screws and mounting plates per m². For 1000 m² of roofing this comes down to 212,1 kg of steel.

The following amount of glue is needed.

HERTALAN KS137: 0,1 kg/m² (including waste)

The components of the glue have been supplied by Paramelt.

C2. Transport to incineration, landfill or recycling

This module has been declared for the Dutch situation.

Below the weights that need to be transported to the waste processor are shown.

The following distances are assumed (standard C2 transport distances for construction products in the Netherlands):

- Transport from demolition to sorting location and recycling: 50 km
- Transport from demolition to sorting location and landfill: 100 km
- Transport from demolition to sorting location and incineration: 150 km
