**SCOPE OF DECLARATION**

This MRPI®-EPD certificate is verified by **Niels Jonkers, Ecochain**.  
 The LCA study has been done by **Pieter Stadhouders, EcoReview**.  
 The certificate is based on an LCA-dossier according to ISO14025 and NEN-EN15804+A1. It is verified according to the 'EPD-MRPI verification protocol May 2017'. EPD's of construction products may not be comparable if they do not comply with NEN-EN15804+A1. Declaration of SVHC that are listed on the 'Candidate List of Substances of Very High Concern for authorisation' when content exceeds the limits for registration with ECHA.

**DEMONSTRATION OF VERIFICATION**

CEN standard EN15804 serves as the core PCR[a]

Independent verification of the declaration and data,  
 according to EN ISO 14025:2010:

internal:            external: X

(where appropriate[b]) Third party verifier:

Niels Jonkers, Ecochain

[a] Product Category Rules [b] Optional for B-to-B communication, mandatory for B-to-C communication (see EN ISO 14025:2010, 9.4).

## DETAILED PRODUCT DESCRIPTION

*Product name: Spenner CEM II/B-S 42,5 N*

A mix of Portland cement and Ground Granulated Blastfurnace Slag (GGBS) sold in bulk quantities. The production processes needed to come to this product are grinding and mixing. The clinker that is used as the main ingredient is self produced. For this, mining, transport, breaking, drying and calcination has been performed. The GGBS is also self produced. For its production, drying and grinding had to be performed.

This product is an intermediate product for making cementitious-bound materials.

COMPONENT (> 1%)	[kg / %]
Anhydrite	3.50%
Iron sulfate	0.40%
Gypsum	1.50%
GBS (Granulated Blastfurnace Slag)	30.00%
Clinker	64.45%
BASF GA 1150 (grinding additive)	0.05%
Limestone	0.10%

(\*) > 1% van total mass

## SCOPE AND TYPE

This product is produced in Erwitte (Germany). It is applied as an intermediate product for cementitious-bound materials.

Analysis has been done using the Ecochain software. Ecoinvent V3.4 was used for the analysis.

It is an intermediate product and therefore end-of-life scenarios are not clear. The specific EPD only covers A1-A3.

MNA = Module not assessed

## REPRESENTATIVENESS

Not applicable as this is an environmental product declaration for a specific product from a specific manufacturer on a specific location.

## ENVIRONMENTAL IMPACT per functional unit or declared unit

INA = Indicator Not Assessed

HWD = Hazardous Waste Disposed

RWD = Radioactive Waste Disposed

MFR = Materials for recycling

EEE = Exported Electrical Energy

NHWD = Non Hazardous Waste Disposed

CRU = Components for reuse

MER = Materials for energy recovery

ETE = Exported Thermal Energy

## CALCULATION RULES

### *Data quality*

Data flows have been modeled as realistically as possible. Data quality assessment is based on the principle that the primary data used for processes occurring at the production site is selected in the first instance. Where this is not available, other reference data is selected from appropriate sources.

### *Data collection period*

The dataset is representative for the production processes used in 2018.

### *Methodology and reproducibility*

The process descriptions and quantities in this study are reproducible in accordance to the reference standards that have been used. The references of all sources, both primary and public sources and literature, have been documented. In addition, to facilitate the reproducibility of this LCA, a full set of data records has been generated which can be accessed via the EcoChain tool. This data portfolio contains a summary of all the data used in this LCA, and correspondingly, in Spenner Erwitte account.

## SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION

### *A1. Raw materials supply*

For all purchased materials, relevant EcoInvent records have been selected.

For modelling reasons, the clinker produced by Spenner and used to make the various types of cement is used as an input product in the LCA of the cement products. Therefore, all impacts allocated to the clinker (purchased materials, incoming transport and processes) are allocated to the A1 section of the cement products.

The use of GBS (Granulated Blastfurnace Slag) is free of burden. No emissions from the steel production are allocated onto the blast furnace slag. This approach is in accordance with CEN/TC 51 PCR for cement and building lime, 2015.

### *A2. Transport of raw materials to manufacturer*

All incoming transports of the purchased materials are done by truck. Truck transport from the Erwitte production facility to the Duisburg production facility and vice versa are modelled as one-way transports, since these trucks always carry full loads from one plant to the other.

### *A3. Manufacturing*

This module covers the manufacturing of the cement product and includes all processes linked to production such as grinding and internal transportation. Use of electricity, fuels and auxiliary materials related to these processes are properly allocated.

### DECLARATION OF SVHC

None of the substances contained in the product are listed in the “Candidate List of Substances of Very High Concern for authorisation”, or they do not exceed the threshold with the European Chemicals Agency.
