**SCOPE OF DECLARATION**

This MRPI®-EPD certificate is verified by **Kamiel Jansen, Primum**.

The LCA study has been done by **Wouter Jan van den Berg, BMI Group**.

The certificate is based on an LCA-dossier according to ISO14025 and NEN-EN15804+A1. It is verified according to the 'EPD-MRPI® verification protocol May 2017.v3.1'. EPDs of construction products may not be comparable if they do not comply with NEN-EN15804+A1. Declaration of SVHC that are listed on the 'Candidate List of Substances of Very High Concern for authorisation' when content exceeds the limits for registration with ECHA.

### DETAILED PRODUCT DESCRIPTION

Concrete roof tiles are made from the natural raw materials: sand, cement and water. We color that mixture with natural iron oxide, so that the color is retained for a long time. Tiles are extruded using aluminium pallets. After curing, we finish the concrete roof tiles with an innovative top layer developed by our own research department. In recent decades, concrete roof tiles have developed enormously in terms of quality and offer aesthetic reliability for many years. For concrete roof tiles with a Glazuron finish, we apply a thin extra layer, which consists of fine sand, provided with coloring based on iron oxides.

In order to attach the tiles to the roof nails, hooks, battens and counterbattens are used (but n.a., cradle to gate LCA).

The reference service life of the product parts / raw materials does not deviate from the product reference service life which is 60 years.

The concrete tiles are made out of cement, sand, pigments and coatings.

pigments	confidential
coatings	confidential

(\*) > 1% of total mass

### SCOPE AND TYPE

The concrete tiles are produced at the location of BMI Plonsk and they are sold at the European market.

The background database is Eco Invent version 3.5. It is a specific EPD for a specific product and the type of this EPD is Cradle-to-Gate.

## SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION

In the Life cycle assessment the following is included in this study:

### Product stage (A1-A3)

The production stage consists of the extraction of raw materials, transportation of the raw materials, processing the raw materials into materials and the production of the product. The required energy for production, external treatments, ancillary materials, packaging material and production emissions are included.

Transport Movement	Transport conveyance	Weight x distance [TKM]
Transport from suppliers and indirect suppliers to BMI	Multiple Transport Conveyances	5.24
Transport to external treatment	Multiple Transport Conveyances	0

### DECLARATION OF SVHC

None of the substances contained in the product are listed in the "Candidate List of Substances of Very High Concern for authorisation", or they do not exceed the threshold with the European Chemicals Agency.
