SCOPE OF DECLARATION

This MRPI®-EPD certificate is verified by **Kamiel Jansen, Primum**.

The LCA study has been done by **Mathias Ruinart de Brimont/Wouter Jan van den Berg, BMI Group**.

The certificate is based on an LCA-dossier according to ISO14025 and NEN-EN15804+A1. It is verified according to the 'EPD-MRPI® verification protocol May 2017.v3.1'. EPDs of construction products may not be comparable if they do not comply with NEN-EN15804+A1. Declaration of SVHC that are listed on the 'Candidate List of Substances of Very High Concern for authorisation' when content exceeds the limits for registration with ECHA.

DEMONSTRATION OF VERIFICATION

CEN standard EN15804 serves as the core PCR[a]

Independent verification of the declaration and data,
 according to EN ISO 14025:2010:

internal: external: X

Third party verifier:

Kamiel Jansen, Primum

[a] PCR = Product Category Rules

DETAILED PRODUCT DESCRIPTION

AeroDek Tradition Plus is a lightweight steel tile combined of steel core, metallic coatings, basecoat (coloured), natural stone granulates (coloured) and a transparent overglaze.

The first step is to press the steel to have the proper profile. Then, there are 4 steps on the stone coated tiles production line as we apply base coat, granules and overglaze and finally cure the tiles.

The Reference Service Life (RSL) of the AeroDek Tradition Plus is 60 years.

COMPONENT (> 1%)	[kg / %]
Steel with primer	confidential
Granules	confidential
Base coat	confidential
Acrylic Varnish	confidential

(*) > 1% of total mass

SCOPE AND TYPE

The AeroDek steel tiles are produced at the location of BMI Herstal and they are applied at the European market.

The background database is Ecoinvent version 3.5. It is a specific EPD for a specific product and the type of this EPD is Cradle-to-Gate. The life cycle stages included are shown next.

REPRESENTATIVENESS

The input data are representative for AeroDek - Tradition Plus 0.60 mm, a product of BMI. The data are representative for the Netherlands.

ENVIRONMENTAL IMPACT per functional unit or declared unit

	UNIT	A1	A2	A3	A1-A3
ADPE	kg Sb-eq.	1.15E-5	6.07E-7	1.96E-3	1.97E-3
ADPF	MJ	2.28E+2	3.32E+0	7.03E+1	3.01E+2
GWP	kg CO2-eq.	1.82E+1	2.13E-1	4.65E+0	2.31E+1
ODP	kg CFC11-eq.	6.93E-7	3.98E-8	4.54E-7	1.19E-6
POCP	kg ethene-eq.	8.97E-3	1.26E-4	3.62E-3	1.27E-2
AP	kg SO2-eq.	5.39E-2	9.23E-4	2.23E-2	7.71E-2
EP	kg (PO4)3--eq.	7.52E-3	1.86E-4	4.21E-3	1.19E-2

ADPE = Abiotic Depletion Potential for non-fossil resources

ADPF = Abiotic Depletion Potential for fossil resources

GWP = Global Warming Potential

ODP = Depletion potential of the stratospheric ozone layer

POCP = Formation potential of tropospheric ozone photochemical oxidants

AP = Acidification Potential of land and water

EP = Eutrophication Potential

RESOURCE USE per functional unit or declared unit

	UNIT	A1	A2	A3	A1-A3
PERE	MJ	6.92E+0	0.00	4.04E+0	1.10E+1
PERM	MJ	0.00	0.00	0.00	0.00
PERT	MJ	2.83E+0	3.49E-2	2.02E+1	2.31E+1
PENRE	MJ	1.62E+2	0.00	5.67E+1	2.19E+2
PENRM	MJ	0.00	0.00	0.00	0.00
PENRT	MJ	1.97E+2	3.54E+0	8.16E+1	2.82E+2
SM	kg	5.48E-1	0.00	2.74E-3	5.51E-1
RSF	MJ	0.00	0.00	0.00	0.00
NRSF	MJ	0.00	0.00	0.00	0.00
FW	m3	1.48E-1	5.65E-4	6.40E-2	2.12E-1

PERE = Use of renewable energy excluding renewable primary energy resources

PERM = Use of renewable energy resources used as raw materials

PERT = Total use of renewable primary energy resources

PENRE = Use of non-renewable primary energy resources excluding non-renewable energy resources used as raw materials

PENRM = Use of non-renewable primary energy resources used as raw materials

PENRT = Total use of non-renewable primary energy resources

SM = Use of secondary materials

RSF = Use of renewable secondary fuels

NRSF = Use of non renewable secondary fuels

FW = Use of net fresh water

OUTPUT FLOWS AND WASTE CATEGORIES per functional unit or declared unit

	UNIT	A1	A2	A3	A1-A3
HWD	kg	6.86E-4	2.12E-6	9.53E-4	1.64E-3
NHWD	kg	1.99E+0	2.03E-1	3.63E-1	2.56E+0
RWD	kg	4.17E-4	2.24E-5	2.90E-4	7.30E-4
CRU	kg	0.00	0.00	3.61E-3	3.61E-3
MFR	kg	0.00	0.00	2.62E-2	2.62E-2
MER	kg	0.00	0.00	0.00	0.00
EEE	MJ	0.00	0.00	2.74E-4	2.74E-4
ETE	MJ	0.00	0.00	4.72E-4	4.72E-4

HWD = Hazardous Waste Disposed
 NHWD = Non Hazardous Waste Disposed
 RWD = Radioactive Waste Disposed
 CRU = Components for reuse
 MFR = Materials for recycling
 MER = Materials for energy recovery
 EEE = Exported Electrical Energy
 ETE = Exported Thermal Energy

CALCULATION RULES

In the Life cycle assessment the following is included in this study: Production (A1-A3).

Modules A1-A3 of the AeroDek tiles production include the following:

- The provision of resources, additives, and energy;
- Transport of resources and additives to the production site;
- Production processes on-site including energy;
- Production of additives, disposal of production residues, and consideration of related emissions;
- Recycling of production/manufacturing scrap. Steel scrap is assumed to reach the end-of-waste status once it is shredded and sorted, thus becomes input to the product system in the inventory.

Cut-off criteria

Measurement of on-site emissions were performed by BMI and those emissions were considered. The specific emissions that are linked to the provision of thermal and electrical energy are also considered in the specific processes. All reported data were incorporated and modelled using the best available LCI data. Data for the sites were cross-checked with one another to identify potential data gaps. No processes, materials or emissions that are known to make a significant contribution to the environmental impact of the studied products have been omitted. On this basis, there is no evidence to suggest that input or output contributing more than 1% to the overall mass or energy of the system - or that are environmentally significant - have been omitted.

Assumptions and approximations

In this study, primary data was used to model all on-site processes. This data was cross-checked to identify and eliminate data gaps. Secondary data (from the Ecoinvent database) was as technologically and geographically representative as possible.

Data quality

The foreground data collected by the manufacturer are based on yearly production amounts and extrapolations of measurements on specific machines and plants. The production data refer to the year 2019. Most of the necessary life cycle inventories for the basic materials are available in the Ecoinvent (v3.5) database.

SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION

In the Life cycle assessment the following is included in this study:

Product stage (A1-A3)

The production stage consists of the extraction of raw materials, transportation of the raw materials, processing the raw materials into materials and the production of the product. The required energy for production, external treatments, ancillary materials, packaging material and production emissions are included.

Transport Movement	Transport conveyance	Weight x distance [TKM]
Transport from suppliers and indirect suppliers to BMI	Multiple Transport Conveyances	2.01
Transport to external treatment	Multiple Transport Conveyances	0.05

DECLARATION OF SVHC

None of the substances contained in the product are listed in the "Candidate List of Substances of Very High Concern for authorisation", or they do not exceed the threshold with the European Chemicals Agency.
