PRODUCT

Fibrofor High Grade

DECLARED UNIT/FUNCTIONAL UNIT

1 kg

DESCRIPTION OF PRODUCT

Fibrofor High Grade is a high-performance monofiber for the primary concrete reinforcement. It distributes evenly in the concrete and provides a three dimensional reinforcement.

SCOPE OF DECLARATION

This MRPI®-EPD certificate is verified by **Anne Kees Jeeninga, Advieslab VOF.**
The LCA study has been done by **Ruben van Gaalen, EcoReview B.V. .**
The certificate is based on an LCA-dossier according to ISO14025 and EN15804+A2 (incl. A1). It is verified according to the 'MRPI®-EPD verification protocol November 2020.v4.0'. EPDs of construction products may not be comparable if they do not comply with EN15804+A2 (incl. A1). Declaration of SVHC that are listed on the 'Candidate List of Substances of Very High Concern for authorisation' when content exceeds the limits for registration with ECHA.

DEMONSTRATION OF VERIFICATION
CEN standard EN15804 serves as the core PCR[a]
Independent verification of the declaration and data, according to EN ISO 14025:2010: internal: external: X
Third party verifier: Anne-Kees Jeeninga, Advieslab v.o.f.
[a] PCR = Product Category Rules

DETAILED PRODUCT DESCRIPTION

These fibers are used as reinforcement in concrete structures. 1kg of high-performance fiber Fibrofor High Grade per m³ concrete is able to replace between 20 and 25 kg of steelfibers or up to 40 kg of conventional steel reinforcement. The service life of the product is dependent on the life span of the concrete it is used in. As the material doesn't oxidize or disintegrate in any other way as it is inside the concrete it doesn't affect the reference service life of the concrete.

In this EPD the production and packaging are considered. Packaging material is included.

Based on a static calculation according to latest standards (Eurocode), the reduction of reinforcement steel can be calculated.

COMPONENT (> 1%)	[kg / %]
Plastic Fibres	100%
Packaging	2%

(*) > 1% of total mass

SCOPE AND TYPE

The type of this EPD is Cradle-to-Gate. All major steps from the extraction of naturalresources to the factory gate are included in the environmental performance of the manufacturing phase, except those that are not relevant to the environmental performance of the product.
The software SimaPro is used to perform the LCA. The background databases used are:
• Ecoinvent (v3.6)

It is not determined as to how the Fibrofor High Grade are to be processed at the end of life (after 50 years). Therefore, this module is not considered in this LCA study. As new and improved systems for the recycling of building products are developed over time, these can be determined and then applied to a future LCA study. Concrete produced with Fibrofor High Grade can however be broken into aggregates which in turn can be used to produce new concrete. It is economically unfeasible to retrieve the Fibrofor High Grade from the cement structure.

REPRESENTATIVENESS

This EPD is representative for products produced and sold in the EU. The Fibrofor High Grade is produced in one production site and cut to demand at the production site of Contec Fiber AG.

ENVIRONMENTAL IMPACT per functional unit or declared unit (indicators A1)

	UNIT	A1	A2	A3	A1-A3

ADP-fossil	MJ, net calorific value	1.02E+2	4.15E+0	4.70E-1	1.07E+2
WDP	m3 world eq. deprived	1.94E+0	1.48E-2	3.54E-4	1.96E+0

GWP-total = Global Warming Potential total
GWP-fossil = Global Warming Potential fossil fuels
GWP-biogenic = Global Warming Potential biogenic
GWP-luluc = Global Warming Potential land use and land use change
ODP = Depletion potential of the stratospheric ozone layer
AP = Acidification Potential, Accumulated Exceedence
EP-freshwater = Eutrophication Potential, fraction of nutrients reaching freshwater end compartment
EP-marine = Eutrophication Potential, fraction of nutrients reaching marine end compartment
EP-terrestrial = Eutrophication Potential, Accumulated Exceedence
POCP = Formation potential of tropospheric ozone photochemical oxidants
ADP-minerals&metals = Abiotic Depletion Potential for non fossil resources [2]
ADP-fossil = Abiotic Depletion for fossil resources potential [2]
WDP = Water (user) deprivation potential, deprivation-weighted water consumption [2]
ND = Not Declared

Disclaimer [2]

The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.

ENVIRONMENTAL IMPACT per functional unit or declared unit (additional indicators A2)

	UNIT	A1	A2	A3	A1-A3
PM	Disease incidence	1.55E-7	2.47E-8	-1.64E-12	1.80E-7
IRP	kBq U235 eq.	8.80E-2	1.74E-2	2.12E-2	1.27E-1
ETP-fw	CTUe	5.93E+1	3.70E+0	7.77E-2	6.31E+1
HTP-c	CTUh	1.23E-9	1.20E-10	6.58E-13	1.35E-9
HTP-nc	CTUh	3.67E-8	4.05E-9	1.15E-11	4.08E-8
SQP	---	2.30E+1	3.60E+0	-7.39E-4	2.66E+1

PM = Potential incidence of disease due to PM emissions
IRP = Potential Human exposure efficiency relative to U235 [1]
ETP-fw = Potential Comparative Toxic Unit for ecosystems [2]
HTP-c = Potential Comparative Toxic Unit for humans [2]
HTP-nc = Potential Comparative Toxic Unit for humans, non-cancer [2]
SQP = Potential soil quality index [2]
ND = Not Declared

Disclaimer [1]

This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

Disclaimer [2]

The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.

RESOURCE USE per functional unit or declared unit (A1 / A2)

	UNIT	A1	A2	A3	A1-A3
PERE	MJ	7.93E+0	5.20E-2	7.67E-3	7.99E+0
PERM	MJ	0.00	0.00	0.00	0.00
PERT	MJ	7.93E+0	5.20E-2	7.67E-3	7.99E+0

NRSF	MJ	0.00	0.00	0.00	0.00
FW	m3	4.75E-2	5.06E-4	1.07E-4	4.81E-2

PERE = Use of renewable energy excluding renewable primary energy resources
PERM = Use of renewable energy resources used as raw materials
PERT = Total use of renewable primary energy resources
PENRE = Use of non-renewable primary energy resources excluding non-renewable energy resources used as raw materials
PENRM = Use of non-renewable primary energy resources used as raw materials
PENRT = Total use of non-renewable primary energy resources
SM = Use of secondary materials
RSF = Use of renewable secondary fuels
NRSF = Use of non renewable secondary fuels
FW = Use of net fresh water
ND = Not Declared

OUTPUT FLOWS AND WASTE CATEGORIES per functional unit or declared unit (A1 / A2)

	UNIT	A1	A2	A3	A1-A3
HWD	kg	3.33E-5	1.05E-5	4.26E-8	4.38E-5
NHWD	kg	3.42E-1	2.63E-1	8.98E-6	6.05E-1
RWD	kg	9.10E-5	2.73E-5	8.11E-6	1.26E-4
CRU	kg	0.00	0.00	0.00	0.00
MFR	kg	0.00	0.00	0.00	0.00
MER	kg	0.00	0.00	0.00	0.00
EEE	MJ	0.00	0.00	0.00	0.00
ETE	MJ	0.00	0.00	0.00	0.00

HWD = Hazardous Waste Disposed
NHWD = Non Hazardous Waste Disposed
RWD = Radioactive Waste Disposed
CRU = Components for reuse
MFR = Materials for recycling
MER = Materials for energy recovery
EEE = Exported Electrical Energy
ETE = Exported Thermal Energy
ND = Not Declared

BIOGENIC CARBON CONTENT per functional unit or declared unit (A2)

	UNIT	A1	A2	A3	A1-A3
BCCpr	kg C	0.00	0.00	0.00	0.00
BCCpa	kg C	0.00	0.00	0.00	0.00

BCCpr = Biogenic carbon content in product
BCCpa = Biogenic carbon content in packaging
ND = Not Declared

CALCULATION RULES

Data quality

Data flows have been modeled as realistically as possible. Data quality assessment is based on the principle that the primary data used for processes occurring at the production site is selected in the first instance. Where this is not available, other reference data is selected from appropriate sources.

Data collection period

The dataset is representative for the production processes used in 2020.

Methodology and reproducibility

The process descriptions and quantities in this study are reproducible in accordance to the reference standards that have been used. The references of all sources, both primary and public sources and literature, have been documented. In addition, to facilitate the reproducibility of this LCA, a full set of data records has been generated.

SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION

A1. Raw materials supply

As the majority of the Fibrofor High Grade is produced at a supplier, which remains confidential, this data has been inventoried and is part of module A1 for Contec Fiber AG. The production starts with the melting of the raw material. It is then extruded by an extrusion machine. After extrusion the material is cooled through water and span on spindles in order to stretch it into the required thickness. A winding machine assembles a bundle of strings onto a bobbin. After the bundles are wrapped with a solvable foil they are transported to Contec Fiber AG.

A2. Transport of raw materials to manufacturer

The transportation of the suppliers to Contec Fiber AG is done by truck.

A3. Manufacturing

This module covers the manufacturing at Contec where cutting to the correct size and bagging in paper packaging takes place. Use of electricityis taken into account.

DECLARATION OF SVHC

None of the substances contained in the product are listed in the “Candidate List of Substances of Very High Concern for authorisation”, or they do not exceed the threshold with the European Chemicals Agency.
