SCOPE OF DECLARATION

eyrise® s350 Privacy Panel

PRODUCT

DECLARED UNIT/FUNCTIONAL UNIT

A glass build-up of 1230x1480 mm, calculated back to 1m², for a privacy glass unit, which is used indoors and a lifetime of 30 years.

DESCRIPTION OF PRODUCT

eyrise® i350 is a glass build-up consisting of Liquid Crystals (LC) molecules embedded between two glass sheets.

MORE INFORMATION https://www.eyrise.com/

This MRPI®-EPD certificate is verified by Anne Kees Jeeninga, Advieslab vof. The LCA study has been done by Elsemieke Juffer, NIBE BV.

The certificate is based on an LCA-dossier according to ISO14025 and EN15804+A2. It is verified according to the 'MRPI®-EPD verification protocol November 2020.v4.0'. EPDs of construction products may not be comparable if they do not comply with EN15804+A2. Declaration of SVHC that are listed on the 'Candidate List of Substances of Very High Concern for authorisation' when content exceeds the limits for registration with ECHA.

DETAILED PRODUCT DESCRIPTION

eyrise® i350 Instant privacy glass is a laminated glass unit, which consists of Liquid Crystals (LC) molecules embedded between two glass sheets having a coating of transparent conductive oxide.

A typical privacy panel unit consists of a laminated inner pane, the cell, and a laminated outer pane. The inner and outer pane are a laminate of heat-strengthened cover glass and an eyrise® cell. The eyrise® cells constitute the core of dynamic tinting in an eyrise® Privacy Panel, an eyrise cell has a thickness of 8mm. A low voltage changes the orientation of liquid crystal molecules and hence it's light and heat transmittance. This change in orientation determines the tint of solar glass.

The weight per square meter, with the Privacy Panel buildup, is 50 kg/m². Reference service life is based on the EN-17074 and on information from the manufacturer (Durability_EPD). The PCR is followed and 30 years is adhered to.

The total weight for a window with a size of 1,23m x 1,48m is 79 kg (this includes the weight of the glass and PVB only).

The power consumption is < 5 W/m². The eyrise® Privacy Panel is driven by an eyrise® driver through a driver cable. The computer modules that are needed as the control panels for the sun protection function have a lifetime expectancy of 10 years and a warranty of 5 years.

Specifications on the build-up are confidential and will not be disclosed.

COMPONENT >1% of total mass	[kg / %]
Glass	75-80%
PVB layer	5-7%
Aluminium	2-5%
Overige (Staal, technische modules, copper)	5-10%

(*) > 1% of total mass

SCOPE AND TYPE

The product specific EPD for eyrise i350 Privacy Panel is a Cradle-to-Gate with options EPD. The product is produced in the Netherlands. The software is Simapro 9.1 and NIBE's R<THINK application are used to perform the LCA. The Ecoinvent 3.6 database was used. The validity of this EPD is in correspondence with the specifications of the LCA project report. The target groups of this LCA study are users of EPD's (business to business) in accordance with the EN 15804:2019 +A2. The LCA is intended for publication at MRPI and EcoPlatform.

The input data are representative for eyrise i350 Privacy Panel, a product of eyrise B.V. The data are representative for production in the Netherlands for the European market.

REPRESENTATIVENESS

Data collection period

All data (materials, production amount and total energy) is collected in 2021-2022 and relate to the year 2020. The amounts of electricity and gas use for production are based on consumption data in the year 2020.

PM = Potential incidence of disease due to PM emissions

IRP = Potential Human exposure efficiency relative to U235 [1]

ETP-fw = Potential Comparative Toxic Unit for ecosystems [2]

HTP-c = Potential Comparative Toxic Unit for humans [2]

HTP-nc = Potential Comparative Toxic Unit for humans, non-cancer [2]

SQP = Potential soil quality index [2]

Disclaimer [1]

- This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

Disclaimer [2]

- The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experience with the indicator.

CALCULATION RULES

Cut-off criteria

There is no cut-off of inputs and outputs in any of the processes during the life cycle stage, unit processes of each declared life cycle stage are considered.

Allocation

The energy use per kilogram product is determined by allocating the total energy use of 2020 to the total amount of produced products in kilogram.

In this LCA study the following is included:

Product stage(A1-A3)

The production stage consists of the extraction of raw materials, transportation of the raw materials, processing the raw materials into materials and the production of the product. The required energy for production, external treatments, ancillary materials, packaging material and production emissions are included.

Construction process stage (A4-A5)

The construction stage (A5) is not considered, transport to the construction site (A4) is considered. The computer modules, which are officially transported from Veldhoven to the construction site directly, are added in the A4 transportation because of the small weight this has little impact on the total of the environmental emissions. Transportation in A4 is modelled for 1 km, the results can be multiplied by the distance that is required for the specific project. Hence, the users can determine for their respective project what the value must be, and find their sources accordingly.

Use stage (B1-B7)

The use stage (B1 to B7) is not considered.

End of life stage (C1-C4)

When the end of the life stage of the building is reached, the de-construction/demolition begins. This EPD considers de-construction/demolition (C1), the necessary transport (C2) from the demolition site to the sorting location and distance to final disposal. The end of life stage includes the final disposal to landfill (C4), incineration (C3) and needed recycling processes up to the end-of-waste point (C3). Loads and benefits of recycling, re-use and exported energy are part of module D. The default end-of-life scenarios of the annex (november 2020) to the NMD Determination method v1.0 have been used for the various materials in the product.

Benefits and Loads beyond the system boundary (D)

This stage contains the potential loads and benefits of recycling and re-use of raw materials/products. The loads contain the needed recycling processes from end-of-waste-point up to the point-of-equivalence of the substituted primary raw material and a load for secondary material that will be lost at the end-of-life stage. The loads and benefits of recycling and reuse are included in this module. The benefits are calculated based on the primary content and the primary equivalent. In addition, the benefits of energy recovery are granted at this stage. The amount of avoided energy is based on the Lower Heating Values of the materials and the efficiencies of the incinerators as mentioned in the NMD Determination method v1.0 or Ecolnvent 3.6 (2019).

Data quality

The data quality is decribed below by theme:

Geographical coverage

The input data is representative for i350 Privacy Panel of eyrise B.V. The data are representative for production in the Netherlands for the European market.

Time period covered

Production data concerning the material composition are collected in the period 2021-2022 and relate to the year 2020. The amounts of electricity and gas use for production are based on consumption data in the year 2020.

Technology coverage

The (current) technology for the production of raw materials in the year 2020 is used.

Attention was paid to the accuracy, completeness, representativeness, consistency and reproducibility of the data, as follows:

Precision

Production Data are collected from financial statements, bill of materials, calculations, measurements and estimates. The collected data has sufficient accuracy for true outcomes.

Completeness

The aim was to obtain complete data of materials, transportation, energy, emissions and waste. All relevant environmental interventions are included in the inventory.

Representativeness

The representativeness of the data is good, because they are based on the processes that occur in one factory. The origin of the materials is properly inventoried. The input data are representative for the actually produced glass-unit.

Consistency

The consistency is guaranteed by only using one database, Ecolnvent 3.6.

Reproducability

The values on which this LCA is performed, can be found in this report and the corresponding project file. The way on which the data are collected and where the information is based on, is included. As a result, the preformed LCA is reproducable.

SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION

End-of-life stage (C2-C4)

At the end-of-life stage scenarios are used for waste processing. The scenarios on which the LCA is based are outlined in more detail below.

	Name: glass	Value	Unit
	Transport distance for recycling (module C2)	50	km
	Transport distance for landfill (module C2)	100	km
	Recycling	70	%
(Landfill	30	%
	Name: PVB layer	Value	Unit
	Transport distance for recycling (module C2)	50	km
	Transport distance for landfill (module C2)	100	km
	Transport distance for incineration (module C2)	150	km
	Landfill	10	%
	Incineration	85	%
	Recycling	5	%
	Name: Aluminium	Value	Unit
	Transport distance for recycling (module C2)	50	km
	Transport distance for landfill (module C2)	100	km
	Transport distance for incineration (module C2)	150	km
	Landfill	3	%
	Incineration	3	%
	Recycling	94	%
	Name: Galvinised steel	Value	Unit
	Transport distance for recycling (module C2)	50	km
	Transport distance for landfill (module C2)	100	km
	Transport distance for incineration (module C2)	150	km
	Landfill	5	%
	Recycling	95	%
	Name: Technical modules (polyolefines (i.a.	- •	
	pe,pp))	Value	Unit
	Transport distance for recycling (module C2)	50	km
	Transport distance for landfill (module C2)	100	km
	Transport distance for incineration (module C2)	150	km
	Recycling	5	%
	Landfill	10	%
	Incineration	85	%

DECLARATION OF SVHC

The product does not contain SVHC.

REMARKS

Framing, fastening materials, adjusting frame, hinges and locks, silencing box, doorstep or water barrier are not included in this LCA, it is purely the glass.
