PRODUCT
SolidScreen Standard 105

DECLARED UNIT/FUNCTIONAL UNIT
Assembly of 3300 mm wide x 1500 mm high, calculated back to 1m².

DESCRIPTION OF PRODUCT
The SolidScreen Standard forms the basis of the entire SolidScreen line up. The SolidScreen is a wind resistant vertical zipper screen which is effectively blocking solar heat and offers visual comfort by admitting diffused light without blocking the view to the outside.

SCOPE OF DECLARATION
This MRPI®-EPD certificate is verified by **Kamiel Jansen, Aveco de Bondt.**
The LCA study has been done by **Atakan Larcin / Sabine Welman, NIBE / AVZ-Group.**
The certificate is based on an LCA-dossier according to ISO14025 and EN15804+A2/Bepalingsmethode. It is verified according to the 'MRPI®-EPD verification protocol November 2020.v4.0'. EPDs of construction products may not be comparable if they do not comply with EN15804+A2/Bepalingsmethode. Declaration of SVHC that are listed on the 'Candidate List of Substances of Very High Concern for authorisation' when content exceeds the limits for registration with ECHA.

DEMONSTRATION OF VERIFICATION
CEN standard EN15804 serves as the core PCR[a]
Independent verification of the declaration and data, according to EN ISO 14025:2010:
internal: external: X
Third party verifier:
Kamiel Jansen, Aveco de Bondt
[a] PCR = Product Category Rules

DETAILED PRODUCT DESCRIPTION

The SolidScreen is a very popular zip screen. Besides effectively blocking solar heat (thermal comfort), the SolidScreen offers visual comfort by allowing diffuse light without blocking the external view. The system has been successfully tested at wind speeds up to 145 km/h (12 Beaufort) and has achieved the highest class in TÜV tests on lifespan and wind load. This makes the SolidScreen extremely suitable for high-rise use.

The SolidScreen is manufactured from durable materials and is extra stable, for example, due to double bearings in various bungs and a special cover support for large widths. The optional rollers with recessed fabric groove significantly reduce the fabric markings. All SolidScreens have mounting plates, which makes it easy to slide the roller into and out of the top cover, and various guides allow the motor cable to be routed completely out of sight. There is also a side guide for use under a terrace roof or Cubola. All this makes SolidScreen the ideal screen for both home and project use.

The SolidScreen is always made with Tibelly screenfabric with zipper. A zipped screen fabric is provided with an upper and lower hem of 3.5 cm for the cord. These are thermally welded. At the top edge both corners are cut diagonally (angle of 3.0 x 3.0 cm). The sides of a zipped screen fabric are provided with zippers attached by means high frequency welding. Hylas applies the SLIM-ZIPP as standard. The zipper of the innovative SLIM-ZIPP is considerably thinner than the band previously used. This allows us to weld the zipper completely into the screen fabric during the manufacturing process. This results in a thinner roll diameter which results in a nicer hanging appearance.

COMPONENT >1% of total mass	[kg / %]
Steel components and reinforcement staff	2,66 kg
Aluminium profiles and components	2,56 kg
Screen fabric (41,5% PVC and 58,5% glass fibre) + zipper	0,574 kg
Motor	0,43 kg
PA6 30% reinforced and PA6	0,11 kg
Stainless steel fixing materials	0,10 kg
Cardboard (packaging)	0,48 kg

**(*) > 1% of total mass**

SCOPE AND TYPE

The purpose of this LCA is to compile environmental data of materials and products used in the built environment. So that the environmental data can be used in calculations of buildings.

The purpose of this report is to draw up a review dossier with the results of 'set 1' and 'set 2' for the product as mentioned in the NMD Determination method Environmental performance Construction works v1.0 July 2020. This document defines a standardized method for a LCA in the Netherlands, of a product used in the build environment, in addition to EN 15084+A2. The review dossier is in accordance with EN15804+A2, ISO14040 and ISO14044. The target groups of this LCA study are: Users of the ECO Platform or programs that use this database, such as MRPI freetool and BREEAM.

REPRESENTATIVENESS

The product SolidScreen 105 was developed in the year 2013. The product composition is in accordance with the production method from the manual that was published in the year 2018. has been adjusted, because the reinforcement guidelines have been changed. The SolidScreen Standard 105 has been produced on the production site in Cuijk, the Netherlands. For the consumption of energy we have assumed the year 2020.

SQP = Potential soil quality index [2]

Disclaimer [1]

- This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

Disclaimer [2]

CALCULATION RULES

SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION

The LCA includes the following phases of the SolidScreen Standard life cycle:
- Extraction of raw materials (A1)
- Transportation to the production locations (A2)
- Production of SolidScreens at production location Smits in Cuijk (A3)
- The transportation of the SolidScreens to the construction sites (A4)
- Construction proces of mounting SolidScreens to the facade (A5)
- Using phase of the SolidScreens (B1)
- Preventative and regular maintenance activities (B2-5).
- End of life stage (C1-C4)
- Benefits and loads beyond the system boundary (D)

When the end of the life stage of the building is reached, the de-construction/demolition begins. This EPD includes de-construction/demolition (C1), the necessary transport (C2) from the demolition site to the sorting location and distance to final disposal. The end of life stage includes the final disposal to landfill (C4), incineration (C3) and needed recycling processes up to the end-of-waste point (C3). Loads and benefits of recycling, re-use and exported energy are part of module D. The default end-of-life scenarios of the annex (november 2020) to the NMD Determination method v1.0 have been used for the various materials in the product. Benefits and loads beyond the system boundary (D) This stage contains the potential loads and benefits of recycling and re-use of raw materials/products. The loads contain the needed recycling processes from end-of-waste point up to the point-of-equivalence of the substituted primary raw material and a load for secondary material that will be lost at the end-of-life stage. The loads and benefits of recycling and reuse are included in this module. The benefits are calculated based on the primary content and the primary equivalent. In addition, the benefits of energy recovery are granted at this stage.

Aluminium for buildings (i.a. profiles, sheets, pipes)	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	94.00	%
Landfill	3.00	%
Incineration	3.00	%
Re-use	0.00	%

Metals, others (i.a. fasteners, fittings)	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	90.00	%
Landfill	5.00	%
Incineration	5.00	%
Re-use	0.00	%

Plastics, (via residue)	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	0.00	%
Landfill	20.00	%
Incineration	80.00	%
Re-use	0.00	%

Steel, construction profiles	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	94.00	%
Landfill	1.00	%
Incineration	0.00	%
Re-use	5.00	%

PVC, pipes	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	70.00	%
Landfill	10.00	%
Incineration	20.00	%
Re-use	0.00	%

Elastomeres (i.a. epdm) (i.a. roofing, foils)	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	5.00	%
Landfill	10.00	%
Incineration	85.00	%
Re-use	0.00	%

Organic material, other (i.a. insulation)	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	0.00	%
Landfill	5.00	%
Incineration	95.00	%
Re-use	0.00	%

Plastics, reinforced (i.a. profiles, sheets, pipes)	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	0.00	%
Landfill	0.00	%
Incineration	100.00	%
Re-use	0.00	%

Finishes (adhered to wood, plastic, metal)	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	0.00	%
Landfill	0.00	%
Incineration	100.00	%
Re-use	0.00	%

Corrugated board / Core board (PEF scenario)	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	75.00	%
Landfill	0.00	%
Incineration	25.00	%
Re-use	0.00	%

Zinc layer coil | Steel federation NL	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	95.00	%
Landfill	5.00	%
Incineration	0.00	%
Re-use	0.00	%

Polyolefines (i.a. pe,pp) (i.a. pipes, foils)	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	5.00	%
Landfill	10.00	%
Incineration	85.00	%
Re-use	0.00	%

Copper, mixed (electricity cables)	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	85.00	%
Landfill	5.00	%
Incineration	10.00	%
Re-use	0.00	%

Organic material, via residue	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	0.00	%
Landfill	85.00	%
Incineration	15.00	%
Re-use	0.00	%

PVC, frame profiles	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	80.00	%
Landfill	10.00	%
Incineration	10.00	%
Re-use	0.00	%

Steel, fasteners	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	99.00	%
Landfill	1.00	%
Incineration	0.00	%
Re-use	0.00	%

Zinc/galvinised steel (i.a. profiles, sheets, zinc coating)	Value	Unit
Transport distance for recycling (Module C2)	50.00	km
Transport distance for landfill (Module C2)	100.00	km
Transport distance for incineration (Module C2)	150.00	km
Recycling	95.00	%
Landfill	5.00	%
Incineration	0.00	%
Re-use	0.00	%

DECLARATION OF SVHC

None of the substances contained in the product are listed in the "Candidate List of Substances of Very High Concern for authorizaton",

REMARKS

The value of the Dutch environment cost indicator (MKI) over the entire life cycle analysis (A to D) is €3,96707 per 1m² SolidScreen.
