# **SCOPE OF DECLARATION**

This MRPI®-EPD certificate is verified by **Pieter Stadhouders., EcoReview V.O.F.** The LCA study has been done by **leke Bak, Ecochain Technologies B.V.** The certificate is based on an LCA-dossier according to ISO14025 and EN15804+A2/Bepalingsmethode. It is

verified according to the 'MRPI®-EPD verification protocol November 2020.v4.0'. EPDs of construction products may not be comparable if they do not comply with EN15804+A2/Bepalingsmethode. Declaration of SVHC that are listed on the 'Candidate List of Substances of Very High Concern for authorisation' when content exceeds the limits for registration with ECHA.

# DETAILED PRODUCT DESCRIPTION

Anova® 1000 Rheology Modifier is a high performance bio-based rheology modifier for asphalt binders to modify or shift the PG or Penetration grade of asphalt while enhancing low temperature performance. It can be used to combatibilize polymer for efficient production of polymer modified bitumen, increase the useful temperature interval (UTI), or to increase the penetration of emulsion base binders.

# **SCOPE AND TYPE**

Ecochain is used as LCA software. Ecoinvent v3.6 and Nationale Milieudatabase 3.3 are used for this analysis. The study covers phases A1-A3 (from materials used to the production).

SQP = Potential soil quality index [2]

### Disclaimer [1]

- This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

### Disclaimer [2]

- The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experience with the indicator.

# CALCULATION RULES

Data quality: In this study the data flows have been modelled as realistic as possible within the practical feasibility of the LCA practitioner. The data quality is based on the principle that the primary data used for processes, occurring at the production site, must be of higher quality than background data of other processes. The processes used in the production of Anova® 1000 Rheology Modifier are geographically representative, meaning that the production location of Anova® 1000 Rheology Modifier lies within the region for which the relevant Ecoinvent environmental records have been selected. All environmental impacts and economic flows – from sources such as resources, energy, emissions and waste – were quantified and qualified in environmental effects. There is no presumption that relevant inputs or outputs have been omitted.

Methodology and reproducibility: The process descriptions and quantities in this study are entirely quantitatively reproducible in accordance to the reference standards that have been used. The references of all sources, both primary and public sources and literature, have been documented in the LCA report.

# SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION

The Anova® products are manufactured through a combination of vegetable oil formulation and chemical modification to modify the chemical compatibilities and functionality for enhanced solubility and performance in bituminous products.

# DECLARATION OF SVHC

None of the substances contained in the product are listed in the "Candidate List of Substances of Very High Concern for authorisation", or they do not exceed the threshold with the European Chemicals Agency.
