EXPIRY DATE

20-7-2030

SCOPE OF DECLARATION

This MRPI®-EPD certificate is verified by Mantijn van Leeuwen, Nibe. The LCA study has been done by Chantal Houben, SGS INTRON. The certificate is based on an LCA-dossier according to ISO14025+EN15804+A2. It is verified according to the 'MRPI®-EPD verification protocol November 2020.v4.0'. EPDs of construction products may not be comparable if they do not comply with EN15804+A2. Declaration of SVHC that are listed on the 'Candidate list of Substances of Very High Concern for authorisation' when content exceeds the limits for registration with ECHA.

PRODUCT

Swisspearl Angle ridge

DECLARED UNIT / FUNCTIONAL UNIT

1 Mass (kg)

DESCRIPTION OF PRODUCT

Angle ridges are fibre cement roof accessories that connect the two roof slopes at the hip.

Ing. L. L. Oosterveen MSc. MBA Managing Director MRPI 	DEMONSTRATION OF VERIFICATION
	CEN standard EN15804 serves as the core PCR [1]
	Independent verification of the declaration an data according to ISO14025+EN15804+A2 Internal: External: X
	Third party verifier: Mantijn van Leeuwen, Nibe 
[1] PCR = Product Category Rules	

DETAILED PRODUCT DESCRIPTION (PART 1)

Swisspearl Angle ridges are fibre cement roof accessories that connect the two roof sides at the hip.

These accessories are manufactured with Hatschek technology. A very thin slurry of water, binder and fibres are mixed and introduced into each of the vats of the Hatschek machine. The rotating sieve cylinder in the vats collects a thin layer of solid material that is further dewatered as it is transferred to a felt and further on to an accumulating format roller.

At the required thickness, the accumulated layers are cut, molded and transferred into the pre-curing area. Production waste is returned to the manufacturing process as much as possible. After pre-curing, the products are stored under continued control of temperature and humidity.

The fiber cement products have a reference service lifetime of 50 years according to the BBSR.

DETAILED PRODUCT DESCRIPTION (PART 2)

The energy process used in the calculation is listed in the table below.

Global warming potential (GWP) of 1 kWh energy	Process	GWP (kg CO ₂ eq)
Electricity Poland	Electricity, low voltage {PL} market for electricity, low voltage Cut-off, U	0,987

SCOPE AND TYPE

The product was made in Poland, Trzemeszno. The calculations were done for the Dutch and are also applicable for the European market. The end-of-life was also calculated for Europe.

The LCA software used in Simapro with the background database Ecoinvent 3.9.1 allocation, cut-off by classification – unit were used. For some basic processes, the Simapro file of the National Environmental Database version 3.9 were also used. This EPD is product specific.

PRODUCT STAGE			CONSTRUCTION PROCESS STAGE		USE STAGE							END OF LIFE STAGE				BENEFITS AND LOADS BEYOND THE SYSTEM BOUNDARIES
Raw material supply	Transport	Manufacturing	Transport gate to site	Assembly	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	De-construction demolition	Transport	Waste processing	Disposal	Reuse - Recovery - Recycling potential

X	X	X	X	X	X	ND	ND	ND	ND	ND	ND	X	X	X	X	X

X = Modules Assessed

ND = Not Declared

REPRESENTATIVENESS

The product is only produced at one production site in Poland. This EPD is representative for 1 kg of Angle ridge fibre cement accessory.

CALCULATION RULES

Primary data at the production location was collected for the base year 2024.

The materials or processes that have been excluded from the study (cut-of rule is well below 1%), are wooden pallets and the waste processing of packaging on incoming materials.

The environmental interventions have been determined using the methods described in the Determination Method. The LCA calculations are performed in accordance with EN 15804:2012+A2:2019. When calculating the energy flows, the fuels and electricity sources used, extraction and transport of the fuels, efficiency of the conversion and distribution of the energy flow are taken into account. The calorific net value (LHV) has also been calculated.

The rules for allocation for multi-input, -output, recycling and reuse processes from the Assessment Method have been followed for all materials. Ecoinvent processes are calculated including the infrastructure processes (capital goods). Ecoinvent processes for landfill are calculated excluding long-term emissions.

SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION (PART 1)

This calculation of the production includes everything needed to procure the raw materials needed in the production of these products.

This includes extraction, treatment, processing, electricity and heat consumption. Wooden pallets were omitted from the final analysis, since it was assumed, they would be reused and have a minimal impact. The transport for the wooden pallets has been added.

Transport of the raw material was done mostly by truck. Some raw materials were partially transported by ship and train. The waste processing of production waste was also taken into account into the calculation.

Transport	Process
Truck	Transport, freight, lorry, unspecified {GLO} market group for transport, freight, lorry, unspecified Cut-off, U
Ship	Transport, freight, sea, container ship {GLO} market for transport, freight, sea, container ship Cut-off, U
Train	Transport, freight train {GLO} market group for Cut-off, U

SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION (PART 2)

Transport to the construction site uses a standard transport as described in the Assessment Method.

The distance to the construction site is calculated from the factory to Utrecht. At the construction site, there is no additional transport included in the model since the fiber cement accessories have a relatively low weight. The accessories are mounted on either a wood or steel construction with the aid of small electrical tools. The estimated energy for the hand tool is very low and is therefore left out of the model. Materials for attachment were considered, only if they are added to the product by Swisspearl during production. Waste treatment and transportation of the packaging waste from the construction site to the municipal waste incinerator is included in this module.

The distance to the waste treatment facility is assumed to be 50 km. The standard process from the Assessment Method is used for truck transport. Additionally, according to the Assessment Method there is a loss of 3% of material for pre-fab products on the construction site. This means that extra material must be added to account for the loss of product.

SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION (PART 3)

An excavator was modeled to demolish and transport the waste on the demolition site from the fiber cement accessories. After being demolished on the building site, the material is transported to waste processing. All the material gets processed before getting recycled or landfilled.

End of life scenario	Percentage	Transport distance (km)	Process
Waste processing	100%	50	0270-reC&Breken, per kg steenachtig (o.b.v. SBK Breken steenachtig MRPI) - NMDv3.9
Landfill	1%	100	Waste cement-fibre slab {RoW} market for waste cement-fibre slab Cut-off, U
Recycling	99%	0	0271-reD&Module D, grind, per kg NETTO geleverd granulaat/grind (vermeden: Gravel, round {RoW} gravel and sand quarry operation Cut-off, U) - NMDv3.9

DECLARATION OF SVHC
