SCOPE OF DECLARATION

This MRPI®-EPD certificate is verified by Branco Schipper, SGS Search. The LCA study has been done by Federica Carollo - Corporate Environmental Sustainability, Mapei SpA. The certificate is based on an LCA-dossier according to EN15804+A2 (+indicators A1). It is verified according to the 'Verification protocol for MRPI LCA project report & EPD 21th of May 2025, V. 5.2'. EPDs of construction products may not be comparable if they do not comply with EN15804+A2. Declaration of SVHC that are listed on the 'Candidate list of Substances of Very High Concern for authorisation' when content exceeds the limits for registration with ECHA.

MORE INFORMATION

Mapeplan TM 15 Broof (t1) is a synthetic roofing waterproofing membrane in flexible polyolefin FPO produced in one multi-extrusion coating process, with high quality raw materials, reinforced with polyester net.

<p>Ing. L. L. Oosterveen MSc. MBA Managing Director MRPI</p>	<p>DEMONSTRATION OF VERIFICATION</p>
	<p>CEN standard EN15804 serves as the core PCR [1]</p>

	<p>[1] PCR = Product Category Rules</p>

DETAILED PRODUCT DESCRIPTION

Mapeplan TM 15 Broof (t1) is a synthetic roofing waterproofing membrane in flexible polyolefin FPO produced in one multi-extrusion coating process, with high quality raw materials, reinforced with polyester net.

Mapeplan TM 15 Broof (t1) is compliant with EN 13956 ("Flexible sheets for waterproofing – Plastic and rubber sheets for roof waterproofing – Definitions and characteristics").

Mapeplan M 15 Broof T1-T3 has a Mass per Unit of 1,65 kg/m²

Packaging materials include:

- Wooden pallet
- Cardboard
- LDPE used as wrapping material

The reference service life of the roofing membrane, according to Polyglass experience, is estimated at least 30 years, if professionally installed and properly used.

DETAILED PRODUCT DESCRIPTION PART 2: Mapeplan T M BROOF(t1) is suitable for exposed roof installations and for mechanical fixing. It is resistant to ultraviolet rays and may be exposed to all weather conditions.

Mapeplan T M BROOF(t1) is a high standard quality product; it performs very good mechanical properties, best workability as well as excellent welding characteristics.

- High solar reflectance
- High workability and weldability
- High mechanical resistance
- Excellent flexibility at low temperatures
- Excellent resistance to ageing
- Excellent resistance to UV rays and to weathering
- Vapour permeability
- Formulation without plasticizer

The production process of FPO/TPO roofing membranes is a multi-extrusion coating process. The production plant produces roofing membranes with an internal reinforcing material made of glass mat or polyester net, also a fleece backed with a woven-non-woven polyester.

FPO/TPO granulate is stored in silos and sent to multi-extrusion plant.

The hot melt compound comes out from the extruders where the reinforced material is combined and totally encapsulated.

The membrane is cooled and finally sent to the packaging area, ready to ship.

Component (> 1%)	(kg / %)
FPO/TPO compounds	70%-95%
Reinforcing materials	5%-15%
Pigments	0%-5%
Other Additives	0%-1%

SCOPE AND TYPE

Mapeplan M 15 Broof T1-T3 is manufactured for the Dutch market by Polyglass SpA (Italy), including packaging of the finished products.

End-of-life geography: Netherlands

Background database - ecoinvent 3.6

LCA software: LCA for Experts (Sphera) 10.9.3.0

Type of EPD: Specific

PRODUCT STAGE			CONSTRUCTION PROCESS STAGE		USE STAGE							END OF LIFE STAGE				BENEFITS AND LOADS BEYOND THE SYSTEM BOUNDARIES

REPRESENTATIVENESS

Mapeplan TM Broof t1 is manufactured in Italy, intended for use within the Dutch market, and its end-of-life scenario is also assessed according to Dutch market conditions.

CALCULATION RULES

The results show the environmental impacts of the products considered in accordance with the requirements of EN15804:2012+A2:2019/AC:2021. The characterization factors are based on the EF 3.0 package. The results refer to the declared unit (see § 2.2). The estimated impacts do not indicate endpoints of the impact categories, nor the exceeding of reference values or risk margins. Allocation rules: In A1 module, the whole annual plant electricity consumption and waste coming from production stage, have been allocated by mass of the product and referred to the declared unit (1sqm of Mapeplan).

Cut-off rules: The following procedure is followed for the exclusion of inputs and outputs:

- All inputs and outputs to a unit process are included in the calculation, for which data are available.

- Less than 1 % of the total mass inputs / outputs of the unit process A1 and A3, are cut off (see table 2). Input flows are covered for over 99% of the formula.

Data quality: According to EN15941 Annex C which directly recall EN 15804 §6.3.8.2 "Data quality requirements, all data included in the study refer to a period between 2019 and 2021; the most relevant ones are specific from supplier, while the others (i.e. transport and minor contribution dataset), come from ecoinvent 3.6. All dataset are not more than 10 years old. Primary data concern the year 2021 and represent the whole annual production. The Quality level concerning datasets used in the EPD can be considered as "very good" or "good" according to Annex E (table E1) of the EN 15804 (current version)

Electricity mix: ds: IT:market for electricity, medium voltage [location based approach]

This Electricity mix can be included within the Case 3a according to table 2 in the LCA calculation rules V2.0 of ECOplatform.

Data: market for electricity, medium voltage - 2019 (IT)□

Source: Ecoinvent 3.6□

GWP-GHG: 0,437 kg CO2-eqv/kWh

SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION

The approach is "cradle to gate" (A1–A3) with modules C1–C4 and module D and optional modules (A1-A3 + A4-A5 +C + D):

• A1, A2, A3 (Product stage): extraction and processing of raw materials (A1), transportation up to the factory gate (A2), manufacturing in Polyglass SpA (Italy) of the finished product and packaging (A3).

• A4-A5 (Construction process stage): transport distance of the finished product to final customers is assumed to be 1350 km (Truck distance from Polyglass SpA to Utrecht, Netherlands). The packaging is collected and sent to treatment.

• B1, B2, B3, B4, B5 (Use Stage): no environmental impact take place during use and no regular maintenance or repair is considered in the given RSL.

• C1, C2, C3, C4 (End of Life stage): the demolition phase (C1) includes the electricity for demolition. With a collection rate of 100% as C&D waste, transports are carried out by lorry over 150 km (C2). An energy recovery ratio (C3) of 80% is considered in accordance with the default NMD EoL scenario. The remaining 20% is landfilled (C4).

• D (Resource recovery stage): contains credits from the incineration of the fraction of product in module C3, at the end of life. This module also contains the credit from the incineration of a fraction of packaging waste (A5).

DECLARATION OF SVHC

The formulation contains no hazardous substances. This product contains no substances of very high concern (SVHC) on the REACH Candidate List/ published by the European Chemicals Agency in a concentration exceeding 0.1 % (by unit weight).
