**SCOPE OF DECLARATION**

This MRPI-EPD+ certificate is verified by **Ecochain**  
The LCA study has been done by **SGS INTRON**

The certificate is based on an LCA-dossier according to ISO14025 and NEN-EN15804+A1. It is verified according to the 'EPD-MRPI verification protocol May 2017'. EPD of construction products may not be comparable if they do not comply with NEN-EN15804+A1. Declaration of SVHC that are listed on the 'Candidate List of Substances of Very High Concern for authorisation' when content exceeds the limits for registration with ECHA.

**VISUAL PRODUCT**

**PRODUCT**

Cement: CEM I 42.5 R

**MRPI-REGISTRATION**

1.1.00030.2019

**EPD-REGISTRATION**

00000806

**DATE OF ISSUE**

1/21/2019

**DATE OF EXPIRY**

1/21/2024

**DECLARED UNIT /FUNCTIONAL UNIT**

The production of 1 metric ton of cement

**DESCRIPTION OF PRODUCT**

Portland cement: CEM I 42.5 R

**DEMONSTRATION OF VERIFICATION**

CEN standard EN15804 serves as the core PCR[a]

Independent verification of the declaration and data,  
according to EN ISO 14025:2010:  
internal: external: X

(where appropriate[b]) Third party verifier:

Niels Jonkers, Ecochain

[a] Product Category Rules [b] Optional for B-to-B communication, mandatory for B-to-C communication (see EN ISO 14025:2010, 9.4).

### DETAILED PRODUCT DESCRIPTION

Cement is produced by intergrinding Portland cement clinker and other constituents. The main constituents of this cement are mentioned in the table below. In this EPD only the production of bulk products is considered. Packaging materials are not included.

COMPONENT (*)	[%]
Portland cement clinker	95
Blast furnace slag	-
Minor additional constituents	0-5

(\*) > 1% of total weight

### SCOPE AND TYPE

The cement in this EPD is produced at the production location of Dyckerhoff in Lengerich.

Cement is a hydraulic binder, mainly used for concrete, mortar and cement screed. Since cement is a semi-finished product, only the production of the cement is included in the LCA.

The LCA is compiled using the “Bepalingsmethode milieuprestaties gebouwen en GWW werken v2.0” as PCR, Ecoinvent v3.4 for background processes, SimaPro 8.5 LCA software. The main impact categories have been calculated with the characterization factors in “SBK Bepalingsmethode version May 25th 2018”

### REPRESENTATIVENESS (IF AVERAGE)

Not applicable, in this study a specific product is considered produced at a specific production site.

INA = Indicator Not Assessed

PERE = Use of renewable primary energy excluding renewable primary energy resources used as raw materials;

PERM = Use of renewable primary energy resources used as raw materials;

PERT = Total use of renewable primary energy resources;

PENRE = Use of non-renewable primary energy resources excluding non renewable primary energy resources used as materials;

PENRM = Use of non-renewable primary energy used as raw materials;

PENRT = Total use of non-renewable primary energy resources;

SM = Use of secondary materials;

RSF = Use of renewable secondary fuels;

NRSF = Use of non-renewable secondary fuels;

FW = Use of net fresh water.

**CALCULATION RULES**

Virtually no materials or processes have been excluded from the study (cut-of rule is well below 1%).

Data collected in 2018 from base year 2013.

The “production” of secondary fuels and materials is allocated to the previous life cycle. Only transportation to the production site of Dyckerhoff is allocated to the production of cement. The emissions from the combustion of secondary fuels in the clinker kiln is allocated to cement production. Biogenic CO2 emissions are not included.

Infrastructure processes in Ecoinvent processes have been included, long term emissions in Ecoinvent processes have been excluded from the LCA calculations.

### SCENARIOS AND ADDITIONAL TECHNICAL INFORMATION

Natural raw materials (mainly limestone) is quarried, crushed and ground into raw meal. The raw meal is fed into the clinker kiln together with primary and secondary raw materials and fuels. In the kiln the raw materials are calcinated and sintered into Portland cement clinker.

The second step is the production of cement. Portland cement is produced by intergrinding Portland cement clinker, limestone and gypsum (setting time regulator), both natural- and flue gas desulfurization (FGD) gypsum are used. Also, a small amount of production dust from the clinker production process is added, and low amounts of additives (chromate reduction agent and grinding aid). Blast furnace slag cements are produced in a similar way. Blast furnace slag is dried and intergrinded with Portland cement clinker and the other constituents.

### DECLARATION OF SVHC

No substances that are listed in the latest "Candidate List of Substances of Very High Concern for authorisation" are included in the product that exceeds the limit for registration.

### REMARKS

Regarding the Dutch National Environmental Database one impact category and the milieukostenindicator (MKI) is added:

- The abiotic depletion potential (non fuel), expressed in kg Sb. eq. of the production of 1 ton of this cement (A1-3) is: 1.73E+00.
- The value of the milieukostenindicator (MKI) of the production of 1 ton of this cement (A1-3) is: € 52.68, -.
